

MiteShield is an organic formula that strengthens a plant's natural defences against Spider Mites. It Boosts the health of the plant so that it can naturally repel a Spider Mite infestation.

It is simple to use, non-toxic, safe and takes up to just four days for the plant to become Spider Mite resistant. Only one application is necessary. It can also be used as a preventative measure for these pests.

MiteShield

Instructions:

1. Empty 50ml (*1.7 fl oz*) of formula into a 2 litre disposable vessel filled with good quality water. A 2 litre mineral water bottle is ideal. (*4.23 US pints*)
2. Shake vigorously for 30 seconds to mix the formula with the water, striking the bottle on the ground as you do so.
3. Take a disposable cup and water each affected plant with approx 200ml of the solution. (*6.76 fl oz*)
4. Recycle the container and cup.
5. Allow up to 6 days for the effects to be seen.
6. Only one application is typically necessary. Don't apply it a second time

For Hyrdoponic systems, prepare as above and add 2 litres of prepared MiteShield solution to the reservoir for every 10 plants on the system. Only use if the water is exposed to UV light at some point in the system.
